Grade 12, Semester 1 study outline

A summary of section headings and key terms, made by students for revision. It is not the handout and does not replace it.

01. Introduction to Graphic Design

I. IMPORTANCE OF GRAPHIC DESIGN IN DIGITAL MARKETING STRATEGY

"Design is about making things good (and then better) and right (and fantastic) for the people who use

1. Importance of Graphic Design in Digital Marketing Strategy

Even though text-based ads are also in fashion, those following the right balance of graphics and text can do

2. Communicates Your Brand Perspective

Graphic designs play an essential role in conveying the underlying message of your product or service. An effective

3. Improve Sales

An excellent graphic design can put money in your pocket by focusing on visual appeal. For instance, if you find

4. Surpasses Language

No matter their primary language, everyone who comes across a website can quickly grasp the visuals. As the

5. Instills brand recall

Brand consistency is crucial in the digital marketing domain. When creating a design strategy, the choice of colors,

II. EIGHT TYPES OF GRAPHIC DESIGN CAREERS

Graphic design is sometimes thought of as a single discipline, but there are actually a variety of different

1. Brand Identity Design

2. Marketing & Advertising Design

3. Packaging Design

4. Web & User Interface Design

5. Print & Publication Design

6. Lettering & Type Design

7. Graphic illustration

Key terms

Even though text-based ads - also in fashion, those following the right balance of graphics and text can do

Brand consistency - crucial in the digital marketing domain. When creating a design strategy, the choice of colors

Graphic design - sometimes thought of as a single discipline, but there are actually a variety of different

Brand identity designers - responsible for crafting the visual identity of the companies they work for. Because of

Graphic illustrators - usually tasked with creating illustrations for commercial and editorial purposes, as well as

02. Typography

I. Introduction

Typography is everywhere we look. It's in the books we read, on the websites we visit, even in everyday life-

II. Common types of Typography

Typography can be an intimidating subject, but it doesn't have to be. You only need to know a little to make a

A. Serif fonts

Serif fonts have little strokes called serifs attached to the main part of the letter.

B. Sans serif fonts

Sans serif fonts don't have that extra stroke-hence the name, which is French for without serif.

C. Display fonts

Display fonts come in many different styles, like script, blackletter, all caps, and just plain fancy.

III. Choosing a font

In a way, fonts have their own language. They all have something to say beyond the words on the page. They

IV. Other Important terms

Maybe you've heard terms like kerning, leading, tracking, and hierarchy. For those with more experience, these

A. Hierarchy

Hierarchy is used to guide the reader's eye to whatever is most important. In other words, it shows them

B. Leading

Leading (rhymes with wedding) is the space between lines of text, also known as line spacing.

C. Tracking

Tracking is the overall space between characters, sometimes called character spacing. Most programs let

D. Kerning

Kerning is the space between specific characters. Unlike tracking, it varies over the course of the word

V. Putting it all together

Well-crafted text can mean the difference between something ordinary and something extraordinary-even if

Key terms

Typography - everywhere we look. It's in the books we read, on the websites we visit, even in everyday life-

Hierarchy - used to guide the reader's eye to whatever is most important. In other words, it shows them

Establishing hierarchy - simple: Just decide which elements you want the reader to notice first, then make

Tracking - overall space between characters, sometimes called character spacing. Most programs let

Kerning - space between specific characters. Unlike tracking, it varies over the course of the word

03. Color

I. Introduction

Color plays a vital role in design and everyday life. It can draw your eye to an image. Sometimes it can trigger

II. Color basics

Let's start at the beginning with a refresher on the basics. Remember learning about primary and secondary

III. A color looks

Now that you know about the color wheel, let's take it one step further with hue, saturation, and value.

1. Hue

Hue is the easiest one; it's basically just another word for color. In the example below, you might describe

2. Saturation

Saturation refers to intensity-in other words, whether the color appears more subtle or more vibrant.

3. Value

Value has to do with how dark or light the color is, ranging from black to white. As you can see below, this

IV. Creating color schemes

So how do we put this all together to create professional-looking color schemes? There are actually tried-

1. Monochromatic

The easiest formula for harmony is monochromatic because it only uses one color or hue. To create a

2. Analogous

An analogous color scheme uses colors that are next to each other on the wheel, like reds and oranges or

3. Complementary

Complementary colors are opposite each other on the wheel; for instance, blue and orange or the classic

4. Split- complementary

A split-complementary color scheme uses the colors on either side of the complement.

5. Triadic

A triadic color scheme uses three colors that are evenly spaced, forming a perfect triangle on the wheel.

6. Tetradic

Tetradic color schemes form a rectangle on the wheel, using not one but two complementary color pairs.

V. Avoiding common mistakes

There are a few classic dos and don'ts when it comes to color. For instance, have you ever seen colors that

Key terms

Secondary colors - created by combining two primary colors. Red and yellow make orange; yellow and blue make green; blue and red make purple.

Hue - easiest one; it's basically just another word for color. In the example below, you might describe the color as red.

Saturation - intensity-in other words, whether the color appears more subtle or more vibrant

Highly saturated colors - brighter or richer. Desaturated colors have less pigment and therefore less intensity.

Complementary colors - opposite each other on the wheel; for instance, blue and orange or the classic red and green.

Color psychology - study of how color affects our emotions and behaviors. Depending on your audience, you might use color to evoke a specific emotion or behavior.

04. Elements of Design

I. Introduction

The fundamentals of design are the foundation of every visual medium, from fine art to modern web design.

II. Line

A line is a shape that connects two or more points. It can be fat, thin, wavy, or jagged-the list goes on. Every line has a direction.

III. Shape

A shape is any two-dimensional area with a recognizable boundary. This includes circles, squares, triangles, and irregular shapes.

IV. Forms

When a shape becomes 3D, we call it a form. Forms make up a variety of things in the real world, including buildings, cars, and people.

V. Texture

Texture is the physical quality of a surface. Like form, it can be part of a three-dimensional object, as in the case of a rough wall or a smooth piece of fabric.

VI. Balance

Balance is the equal distribution of visual weight (more specifically, how much any one element attracts the viewer's eye).

VII. Putting it all together

The fundamentals of design are all about the bigger picture-in other words, learning to appreciate the many ways that design elements work together.

1. Simple

A simple logo design allows for easy recognition and allows the logo to be versatile & memorable. Good design is simple.

2. Memorable

Following closely behind the principle of simplicity, is that of memorability. An effective logo design is one that is easy to remember.

3. Timeless

An effective logo should be timeless - that is, it will endure the ages. Will the logo still be effective in 10, 20, or 50 years?

4. Versatile

An effective logo should be able to work across a variety of mediums and applications. The logo should be able to be used in black and white, in color, and in various sizes.

5. Appropriate

How you position the logo should be appropriate for its intended purpose. For example, if you are designing a logo for a company that sells organic products, you might want to use a natural, earthy color palette.

Key terms

Shapes - vital part of communicating ideas visually. They give images heft and make them recognizable. We use shapes to create a sense of balance and harmony.

Texture - physical quality of a surface. Like form, it can be part of a three-dimensional object, as in the case of a rough wall or a smooth piece of fabric.

Balance - equal distribution of visual weight (more specifically, how much any one element attracts the viewer's eye).

Symmetrical designs - same or similar on both sides of an axis. They feel balanced because each side is a mirror image of the other.

Asymmetrical designs - different, but the weight is still evenly distributed. The composition is balanced because the elements are arranged in a way that creates a sense of equilibrium.

That's because logos - packed with meaning, all designed to make us have a positive experience when we look at them.

Rectangles - often seen as a sign of reliability and robustness, considering they are associated with objects like books, buildings, and cars.

Vertical lines - also versatile, as they can remind us of everything from the walls of a building to the edges of a page.

Abstract shapes - fun category, mainly because they defy the rules of "normal" shapes. Unlike the others, they are not defined by a specific set of characteristics.

Curves - excellent way to add a feeling of motion and rhythm to a logo design, as we often associate them with things like water, clouds, and people.

05. Layout and Composition

Key terms

Proximity - all about using visual space to show relationships in your content. In practice, it's pretty simple-all you need to do is group related items together.

White space - important part of every composition. Now, this doesn't mean literal white space; it just means
Alignment - something you deal with all the time, even if you don't realize it. Whenever you type an email or
Contrast simply - that one item is different from another. In layout and composition, contrast can help you
Contrast - also closely tied to hierarchy, which is a visual technique that can help the viewer navigate your work
Establishing hierarchy - simple: Just decide which elements you want the reader to notice first, then make them
Repetition - reminder that every project should have a consistent look and feel. This means finding ways to

06. Design Styles and Themes

1. 3D

The three-dimensional artwork gives the opposite illusion of a flat design. It is characterized by the

2. Abstract

Abstract is the style of creating a piece of art that is independent from the way it looks in the real world.

3. Clean and minimalist

Minimalism is a style or technique that is characterized by spareness and simplicity. It is the opposite of

4. Conceptual art

Conceptual art is a subcategory of illustration, and is a metaphorical depiction of a visual idea. Consider it

5. Feminine

The opposite of masculine design, feminine style is usually characterized by details that stereotypically

6. Flat

This style could be considered as a subcategory of the minimalist look: it employs minimal use of colors

7. Fun and playful

A design style that inspires fun and usually gives off an informal, rather than rigid, impression.

8. Geometric

Derived from the idea of geometry, this style is characterized by heavy use of straight lines and shapes.

9. Grunge

Sometimes considered as a subcategory of the vintage style, grunge evokes the darker, gritty and cool

10. Illustrated

The illustration style is derived from the interpretation or visual explanation of a text, concept or

11. Luxurious

The luxurious design style evokes the idea of indulging in extra comforts or pleasures additional to the

12. Masculine

Masculine design style is stereotypically appealing to men. Details in masculine design may include

13. Organic and natural

Organic design is a style which takes the flowing natural forms of a reality and characterized by

14. Photorealism

Photorealism is a form of illustration where the designer closely matches it to the original image or photo

Key terms

Abstract - style of creating a piece of art that is independent from the way it looks in the real world

Minimalism - style or technique that is characterized by spareness and simplicity. It is the opposite of

Conceptual art - subcategory of illustration, and is a metaphorical depiction of a visual idea. Consider it

Grunge - also commonly associated with punk and gothic styles

Masculine design style - stereotypically appealing to men. Details in masculine design may include

Organic design - style which takes the flowing natural forms of a reality and characterized by

Photorealism - form of illustration where the designer closely matches it to the original image or photo

Font style - generally the focus of the design

07. The Power of Images

I. Introduction

Images can be a powerful force in design. No matter what the subject, we're naturally drawn to them.

II. Finding images

You don't have to be an artist to use images in your work. All it takes is a little creativity and a willingness

1. Using stock

Maybe you're handy with a camera or have some graphic design experience-that's great! If not,

2. Choosing effective stock

Most stock image sites let you browse or search their offerings. Look for results that are relevant to

3. Image usage rights

Almost every stock image has a license that states how it can be used. Some are very generous and

III. The importance of quality

Of course, it's not just about content. There's also a technical side to images, which can have a big impact

IV. Editing images

Few stock images are perfect as is, even if they're technically high-quality ones. Maybe the image is the

1. Cropping

Cropping can be used to change the size, shape, or focus of an image, making it useful in many

2. Resizing

Resizing an image will ensure it's the perfect fit for your project. Just remember that you can't

V. Putting it all together

Adding photos, graphics, and other visuals to your work is a great way to make it more engaging. Even a

VI. The complete list of facebook image sizes in 2021

1. Facebook Profile Picture Size and Dimensions

2. Facebook Cover Photo Sizes and Dimensions

3. Facebook Photo Post Sizes

Key terms

Stock - perfect when you need something specific-for example, a photo of a tiny dog in a teacup-

Vector graphics - quite different from raster. You can make them any size, big or small, without

That's because vectors - made of something more complex than pixels

Few stock images - perfect as is, even if they're technically high-quality ones. Maybe the image is the

08. Influencing through Design

I. Introduction

Branding and visual identity are all around us. Look closely, and you'll find them on websites, product

II. A closer look at visual identity

Visual identity is kind of like a preview of your brand. Each part of your design is a clue that tells the

III. Logo

A logo is what identifies your brand using a particular mark, type design, or both. The most effective logos

IV. Color

Color helps define your brand in a very powerful way. Not only does it make a strong impression on the

V. Typography

Text is one of the simpler aspects of identity, but it can be surprisingly expressive. All it takes is a different

VI. Images

Images are a huge part of building a unique identity. Every photo, graphic, icon, and button is a chance to

VII. Putting it all together

Visual identity isn't just a marketing tool. It's a way of looking at design that removes a lot of the

Key terms

Branding and visual identity - all around us. Look closely, and you'll find them on websites, product

Visual identity - what your brand looks like, from your logo to your color choices and so much more

Text - one of the simpler aspects of identity, but it can be surprisingly expressive. All it takes is a different

Images - huge part of building a unique identity. Every photo, graphic, icon, and button is a chance to

09. Triangle ExposureParts of Camera

I. Introduction

Good Day future Leaders , In this lesson we are going to learn about the camera parts and its function, also you

II. Parts of Camera and its function

Modern digital cameras are far more complex devices than their film-based cousins. A digital camera is essentially

A. Front

1. **Infrared shutter release sensor:** Lets you fire the shutter remotely
3. **Self-timer light:** Flashes to indicate the self-timer duration before the shutter fires
6. **Reflex mirror:** Light from the lens is reflected up
7. **Lens mount index:** Helps you align your lens correctly when attaching it to the camera
2. **Battery compartment:** The camera's rechargeable batteries are inserted here

C. Top

1. **Mode dial:** Lets you set the required shooting mode
2. **On/Off switch:** Turns the camera on and off
3. **Built-in flash:** A small built-in flashgun, useful as a fill-in light
4. **Hot shoe:** Mount for an external flashgun
5. **Secondary control dial:** Used for setting the camera's shooting and menu functions

Key terms

Modern digital cameras - far more complex devices than their film-based cousins. A digital camera is essentially

10. Lighting used in photographyProduct photography a comprehensive guide

I. Introduction

Light from the sun varies over the course of a day. Understanding how this variation in natural light affects

II. Need to know about the shadows

Shadows are at their sharpest and darkest on cloud-free days.

A. Anatomy of shadows

When the sun illuminates an object, the shadows it casts reveal outline, form, and texture in varying

B. Understand the theory : Light and shadow

As the sun moves around the sky, shadows lengthen, shorten, and change direction. Understanding how

1. Top light

Top light creates shadows down the length of your subject's face;the eyes are rarely clearly visible.

2. Front light

Provided the glare doesn't make your subject squint,front lighting creates attractive, shadow-

3. Back light

Backlight is rarely ideal, but dramatic silhouettes

4. Side light

5. Low-angle light

When the sun is low and off to one side behind

III. 3 Point Lighting

1. Key light

This is the primary and brightest light source in the three-point lighting setup. It gives a scene its overall

2. Fill Light

Mirroring the key light on the opposite side of the camera, the fill light literally fills in the shadows that

3. Back light

The third source in this lighting technique, the backlight (also known as the "rim light" or "hair light") shines on a

C. 5 tips for setting up three- point Lighting

There are several key components to successfully setting up three-point lighting and creating a polished,

Key terms

Shadows - at their sharpest and darkest on cloud-free days

Overcast days - generally shadow-free. This is because light from the sun is diffused by the clouds, which

Backlight - rarely ideal, but dramatic silhouettes

Product photography - type of commercial photography that involves taking pictures of products for

E-commerce - multi-billion dollar industry that relies heavily on product photography. Whether a

BOGO - sales promotion in which an item is offered free or at a reduced price when another item is

Detail shots - exactly what the name conveys. These are close up, detailed shots of one feature of the product

Lifestyle product shots - those in which the product is shown as it looks when it is being used. The gas grill with

Studio shots - very staged and sparse. Shadows are often heavily used in studio shots, and they are often a lot

Light - secret of some of the best product shots. For quality shots, both natural and artificial light can be

11. Depth of Fields

I. Introduction

Deciding which areas of the frame should be sharp and which should be out of focus is key to taking a

II. Need to know in Depth of Fields

III. Understand the theory of Depth of Field

Depth of field refers to the area of acceptable sharpness within an image. In reality, only the element you

III. Exploring Depth of Field

There are no rules insisting that landscapes must be sharp from front to back, or portraits shot with shallow depth

A. Moving in close

B. Isolating a subject

C. Change the focus

Subject : A busy scene with several focal point

D. Standing out

IV. Enhance your images : Adjusting depth of Fields

There will be occasions when the aperture you've selected isn't quite large enough to throw the

1. Protect your file

In order to protect your original file, duplicate the Background layer first. Select the Lasso tool and, without

2. Quick mask

Click on the Quick Mask button and the area you want to appear out of focus should now be colored red.

3. Soften the edges

Click on Filter at the top of the screen, and then Blur, Gaussian Blur. A box will appear with a black-and-white

4. Alter depth of fields

Click on Filter at the top of the screen, and then Blur, Lens Blur. A box will appear with a large preview of your

5. Add finishing touches

Staying with the Lens Blur dialog box, under the Iris heading you will find a Radius slider. Move the slider left and

Key terms

Depth of field - area of acceptable sharpness within an image. In reality, only the element you

12. How to Compose-Cropping

I. Introduction

Over the centuries, a set of compositional "rules" for images has been developed. However, sticking too

II. Need to know

The "rules" of composition are just guidelines, and should not be applied to every picture-following them

A. Understand the theory: The "rules" of composition

Creating a well-balanced, aesthetically pleasing photograph can be a challenge. Painters have the luxury of

1. Using shapes

To create a composition that captures and holds the viewer's attention, you need to trap their gaze within the

2. The rule of thirds

This compositional technique involves dividing the frame into a grid using two horizontal and two vertical lines,

3. Positioning the horizon

Placing the horizon high in the frame suggests that the foreground should take precedence, while also giving a

4. The rule of odds

When your brain is presented with an even number of objects, it automatically sorts them into pairs and then

5. Using natural frames

Surrounding your subject with a natural frame created by elements such as branches, rocks, or a bridge is a great

B. Understand the theory : Lines,curves, and diagonals

When lines are used in a composition, they guide the viewer's eye around the frame; they can also elicit

1. Lead- in lines

A lead-in line is a clear entry point into a picture. It usually starts at the bottom of the frame and guides the eye

2. Horizontal lines

When you study an image featuring a horizontal line, you feel calm and at peace (depending on its content).

3. Zigzags

When the course of a road or a river zigzags through the frame, it suggests rapid motion. In these instances the

4. Curves

Waves lapping at the beach, spiral staircases, and sand dunes all create curves that can add motion and grace to

5. Vertical lines

Pylons, skyscrapers, trees, and fence poles can create striking verticals. These lines indicate stability and

13. Landscape and Cityscape

I. Introduction to Landscape

The natural landscape-topographies of land and water decorated with plant forms and lit by sun and sky-is one

A. Patience and perseverance

A vital but little-appreciated truth about landscapes is that anywhere can look wonderful at some point in time. A

2. Clarity and tranquility -

Use Man-made structures to contrast with topography

C. Style and means-

A tradition has developed that demands large, high-resolution cameras for "proper" landscape photography. This

1. Unconventional views

In a world saturated with beautiful travelogue-style landscape images, there is a place for the more

2. Vintage views

While it always pays to capture the best image you can at the time, the demands of the environment may mean

3. Friendly shadows

Often treated as an enemy, shadows are in fact a landscape photographer's friend: they sculpt shapes, define

4. Colding tones

Conversion from color darkened the blue shadow areas in this snowy scene in Kazakhstan, allowing sunlit areas

II. Introduction to Cityscape

As most of the world's population lives in cities, it is natural that the city is one of the richest sources of pictures.

1. Contrast and conflicts

Using a long-focal-length lens brings relatively distant objects together, emphasizing their differences-old

2. City Skies

The skyline of a city is defined as much by the sky above- the so-called "negative space"-as by the outlines of

3. Working with the enemy

Cars rarely contribute to city scenes in a positive way, yet they are perennially present, and are therefore a

4. Working around a subject

A simple exercise is to take an obvious landmark and then shoot as varied a set of views as possible. These images

5. Supplementary flash

Noticing these flowers first, I went over to photograph them only to find the tower unexpectedly in view. The flash

Key terms

Once white balance - adjusted, you can further refine colors in your photos with the saturation and vibrancy

14. Shutter Speed

I. Introduction to shutter speed

Shutter speed is the length of time the camera shutter is open, exposing light onto the camera

II. How is shutter speed measured?

Shutter speeds are typically measured in fractions of a second when they are under a second. For example, 1/4

III. Shutter speed and exposure

The other important effect of shutter speed is on exposure, which relates to the brightness of an image. If you use

IV. Fast , slow and long shutter speed

A fast shutter speed is typically whatever it takes to freeze action. If you are photographing birds, that may be

V. How to set shutter speed

Most cameras handle shutter speeds automatically by default. When the camera is set to "Auto" mode, the

VI. Shutter speed FAQ

A long shutter speed is typically around 1 second and longer. In comparison, a slow shutter speed can refer to a

VII. Introduction to motion photography

Emily Hancock, a professional Hampshire Photographer, submitted the following tutorial on capturing motion in

VIII. Reason to capture motion

Beginning photographers have likely seen captivating photographs that capture motion. There are several ways to

1. Blurred subject with the background in focus

Let's assume you're photographing a speeding train against a wall of trees in the background. You can blur the

2. Blurred background with the subject in focus

This second technique keeps your subject in sharp focus while the background is blurred. Using our train example,

1. How fast is your subject moving?

2. How much distance exists between the camera and the subject?

3. How much motion do you want your photograph to convey to the viewer?

The faster the shutter speed, the more frozen and crisply-defined your subject will be. Most cameras today will

IX. Potential issue: excess light

Here's a potential issue you may encounter when trying to capture motion in photography:

Key terms

Shutter speed - length of time the camera shutter is open, exposing light onto the camera

Slow shutter speeds - also used to photograph the Milky Way or other objects at night, or in dim

Shutter speeds - typically measured in fractions of a second when they are under a second. For example, 1/4

Long shutter speeds - typically above 1 second - at which point, you will need to use a tripod to get sharp

15. Tips in Portrait Shoot

I. Introduction

Portrait photography is the art of capturing the inherent character of your subject within a photograph. Great

1. Focus on the subject

The subject is the most important aspect of portrait photography. Making the subject comfortable with you

2. Find the right location

The location you choose for the portrait shoot is going to be a significant influence on the final results.

3. Getting the pose right

Figuring out the right portrait photography poses for your subject that portrays them in the most flattering

4. Take candid portrait photos

Getting subjects to pose can sometimes give less than optimal results. Some people are just not comfortable

5. Capture emotions and expressions

Artistic portrait photography is all about finding emotions and expressions in portrait pictures. Getting your

6. Learn how to use your camera

Portraiture photography, first and foremost, is about your artistic expression and technique, which takes a lot

7. Choosing the right lens for portrait photography

As with all photography, the camera lens is the most vital tool in catching the right shot. Again, there is no

8. The background matters

The focus in portraiture, as expected, is on the subject model. However, there are more intricacies than just

9. Understand how Shutter Speed, Aperture, and ISO work together

No photograph will be out of your grasp if you understand the Exposure triangle or the interrelationship of

10. Design a color palette for your portrait shots

You have to consciously design the visual look and feel of your portrait shots, and for this, defining a color

11. Lighting for portrait photography

If you have ever taken a physics lecture about light, you would have learned that light is directional. Lighting is

12. Try out different angles

Most portrait photographs are shot by placing the camera at the eye level of the subject. Shooting at the eye

13. Using props for effect

Adding props to your portrait photography is a great way to add a dash of color, excitement, and impact to

Key terms

Portrait photography - art of capturing the inherent character of your subject within a photograph. Great
Great portrait photography - as much about following the rules and guidelines as it is about breaking out of the
Even if you - familiar with the person being photographed, people can get uncomfortable when they get in front
Artistic portrait photography - all about finding emotions and expressions in portrait pictures. Getting your
While taking a photograph - undoubtedly essential, beginners can often neglect the importance of proper
Non-destructive editing - process in which the editing software does not change the pixels within the

16. Crafting New Images with Photomanipulation

I. Introduction

An art as old as photography itself, explore photo manipulation and learn about photo retouching, photomontage,

1. Craft surreal images using digital photomontage

Photomontage work includes various types of image editing in which multiple photographs are cut up and

2. Tips for making a great photomontage

The most important consideration when getting started is exploration of this medium, because it's so full of

3. Find work you admire

"I used to look at the collages of different artists I liked before I got started," says Jokhadze. With platforms

II. Practicing the art of image manipulations

Creating new images out of existing photos is difficult, but rewarding. The best way to get good at it is to do it.

III. Mood Board

A mood board is a collection of designs, images, shapes, symbols and colors that represent your brand. A mood

1. Collaboration becomes easier

A mood board allows for the brand's design principles to be clearly laid out, making it easy for anyone on the

2. Time is saved

A mood board helps to build a library of approved images, patterns and fonts, saving time on managing

3. A strong visual framework is built

When your brand's look and feel is clearly communicated across your team, it makes any decision that affects

Key terms

Photo manipulation - for artistic and aesthetic expression, not deception. With that in mind, this is how to put
Perspective - first thing you'll want to line up when combining photos. While it's possible to alter
Making sure colors match - your next step to bring images together. Matching shadows, and their range
Double exposure - one of the oldest photo effects. Learn how to do it more easily with modern technology

17. Wedding Theme Ideas and parts of wedding invitation

I. Introduction

Modern Filipino brides now opt for a wedding with a specific theme. Ironically, our wedding was theme-

1. Cherry Blossoms

Cherry blossoms are the unofficial national flower of Japan. ("Sakura" is the Japanese name for a cherry

2. Shabby Chic

For a shabby chic theme, the wedding details chosen should have signs of wear and tear or new items are

3. Beach

Most couples choose this wedding theme for its laid

4. Butterfly

Many ideas abound when creating a celebration based on butterflies. You can choose to go with a simple,

5. Rose

The rose theme wedding idea pairs the vibrant fragrances and colors of roses with the beautiful colors of

6. Victorian Vintage

Do you love the idea of vintage weddings? Is the Victorian era your personal favorite? Let's plan a wedding

7. Rustic Country Style

Do you want a country-style wedding with rusticity and charm by the bucketful? Envisioning a glorious

8. Romantic Whimsical

Candlelight, champagne, a beautiful aura of ambience - this is what a romantic wedding theme entails.

9. Oriental

This is not an exact composite of an Oriental wedding. Instead, these Asian wedding ideas will give you a

10. Outdoor Tent

I think everyone, at one time or another, has toyed with the idea of having an outdoor tent wedding. The

11. Tropical

When you think of the tropics, what comes to mind are warm, sandy beaches, sunshine and blue-green

12. Spring

Spring wedding colors usually lean toward pastel shades paired with the vibrant hues such as the bright

13. Summer

Summer is the time of year when a huge variety of flowers are available. Keep your guests in mind when

Key terms

Below - some possible wedding themes and ideas that I have gathered online which you can use for

Cherry blossoms - unofficial national flower of Japan. ("Sakura" is the Japanese name for a cherry

Since cherry blossoms - naturally delicate, I would suggest you keep your wedding details simple and

Victorian weddings - wonderful choice for a garden wedding. Serve up some crumpets, tea, and old

Summer - time of year when a huge variety of flowers are available. Keep your guests in mind when

18. Portfolio

I. Introduction

Whether you're a full-time graphic designer or simply someone who's interested in dabbling in design as a

II. How to make graphic design portfolio

1. Curate your best work, and show a wide breadth of skill
