

DISS

Disciplines and Ideas in the Social Sciences

Grade 12, Semester 1 study outline

A summary of section headings and key terms, made by students for revision. It is not the handout and does not replace it.

01. The Nature and History of Social Science and its Difference from Natural Science and Humanities

Science and Humanities

I. Introduction

II. Nature and Definition of Social Science

- Social Science is formally defined as an academic discipline and a branch of science that deals with the institutions and functions of human society, and with the interpersonal relationships of individuals as members of society.
- Social Science is composed of several sub-disciplines or branches, which will be discussed later in this handout.

III. History of Social Science

- Who were the people responsible for the development of this essential academic discipline?

ANCIENT AND MEDIEVAL ERA

- Some ideas and concepts of social science have roots dating back to the Ancient Greek and Medieval Muslim philosophers.
- 1 of 4 -- In ancient civilizations, there was no distinction between the disciplines now considered the liberal arts and the sciences.
- AGE OF ENLIGHTENMENT (17th to 18th Century, also known as the Age of Reason) - Social science, although it was not called that yet, was first taught during this era, which was an intellectual and philosophical movement in Europe during this time.
- He is also considered the father of sociology, one of the major disciplines in Social Science.
- Comte was influenced by ideas from French philosopher Charles Fournier and then founded "Positivism", a type of philosophy that focused on the study of human behavior through "social laws" that are based on actual experi...

19TH CENTURY

States

- 2 of 4 -- Use and analysis of "social facts," which were defined by Durkheim as values, cultural norms, and social structures that transcend the individual and can exercise social control

Understanding and identifying social phenomena scientifically

20TH CENTURY AND BEYOND

- The various branches or sub-disciplines under Social Science began to increasingly use quantitative methodology or research in building theories that were generally qualitative in approach.

IV. Differentiating the Three Major Areas of Study

Natural Science

- It deals with natural, tangible, or objectively measurable phenomena like matter, energy, and their interrelations and transformations.
- Methods are usually empirical, experimental, scientific, and logical
- Notable disciplines under Natural Science are Physical Sciences like Astronomy, Earth Science, Physics, an...

Humanities

- It deals with understanding human thought, art, and culture.
- Notable disciplines under Humanities are Philosophy, Literature, Communication, Religion, and various forms of the Arts such as Performing and Visual.
- Methods are usually speculative, experiential, scientific, and abstract

Social Science

- It deals with the institutions and functions of human society and with the interpersonal relationships of individuals as members of society.
- 3 of 4 -- Methods are usually speculative, experiential, scientific, and logical
- Pedido, F.N. (n.d.).

Key terms

02. The Branches of Social Sciences and its Importance

The Branches of Social Sciences and its Importance

I. Introduction

- What are the branches of Social Science?

II. Branches of Social Science

- Anthropology Greek: Anthoropos (human) + logos (the study of) = "the study of humans" It focuses on the "science of man," which analyzes the totality of human existence It combines aspects of Social Science, Humanities, and Natural Science, specifically biology.
- It also involves analyzing how messages are interpreted using different perspectives, such as political, -- 1 of 4 -- cultural, economic, social, etc.
- This includes face-to-face conversations, print media, mass media (radio, television, etc.), and social media, among other forms and outlets.
- Economics Greek: Oikos (family or household) + nomos (custom or law) = "household management" It focuses on describing and analyzing the production, distribution, consumptio...
- Part of studying Law is the discipline of Political Science, which is also described in this section People who specialize or practice Law, after passing the Bar Examination, are usually called Lawyers
- Linguistics

It is defined as the scientific study of language

It also analyzes international relations

Also studies the treatment of mental illnesses

III. Why is Social Science important to learn?

- 8 Reasons To Study (n.d.).

Key terms

Part of studying Law - discipline of Political Science, which is also described in this section

03. Social Science Research and the Scientific Method

Social Science Research and the Scientific Method

I. Introduction

- You may think that the scientific method, and not research, is the driving force behind the developments in Social Science, and that is technically true, however, research is the fundamental concept.
- You can say that research is the path to knowledge, whilst the scientific method is just a way or manner of walking in that path.

I. Research and the Scientific Method

- Research is defined as the systematic investigation and study of and into observed phenomena in order to establish facts and reach new conclusions.

Inductive research

- "to establish facts" - aims to formulate new scientific knowledge

Deductive research

- "to reach new conclusions" - aims to use the prevailing or existing knowledge in a new or innovative manner to establish new ideas Both the approaches of research tell us that in doing research, it is very important to first understand that our current knowledge may be imperfect or even far from the truth.
- What is the best way to get closer to the truth? -- 1 of 4 -- The Scientific Method.
- The Scientific Method, which you definitely have learned about in previous school years, is the systematic process or series of practices for constructing scientific knowledge.

II. Scientific Research Process

- Step 1: Identifying the Problem - A good research problem is a problem that may have more than one answer to the problem.
- It gives you a purpose to find out which of the possible answers is most applicable, most appropriate, and most true for your problem.
- This step ends when there is already a clear and well-defined problem statement which will be a foundation for the succeeding steps.
- A good problem statement must be S.M.A.R.T.

- The researcher must be able to identify the starting and ending points of the research - The problem statement will guide the researcher in choosing and formulating appropriate research questions, hypotheses, methods, and design.
- This includes identification of the following:

Major authors and their works

Scholarly Articles

Related studies

Key terms

Research - defined as the systematic investigation and study of and into observed phenomena in order to

04. Types of Research Methods

Types of Research Methods

- Topic: Types of Social Science Research Methods

I. Introduction

- Does this mean that there is a single best method in conducting research, regardless of topic?
- Though we usually refer to the "Scientific Method" in a singular manner, there are several research methodologies that you can utilize in a research to optimize the results.
- As we have learned, before the researcher proceeds to conduct the research, specifically before gathering data from participants, he/she must already have a research method in mind to complete the framework which will be the foundation of the whole research process.

II. Types of Research

- Quantitative - involves analyzing the relationship among variables by using instruments such as questionnaires and tests that result in quantifiable or numeric data through statistical, mathematical, or computational techniques.
- Other terms for this method are "Empirical-Analytical methods" and "Positivist methods" Here are the common Quantitative methods: -- 1 of 2 -- a.
- Experimental Research - analyzes cause-effect relationships by separating into a control group and an experimental group, and comparing the effect of the "cause" in terms of time 2.
- Qualitative - involves exploring and interpreting the meanings that people or groups ascribe to a specific social or personal issue by asking questions.
- Another term for this method is "Interpretative methods" Here are the common Qualitative methods: c.
- Mixed Methods - involves analyzing a combination of both qualitative and quantitative data which offers a more comprehensive understanding of a specific research problem or a more holistic explanatory framework that produces feasible solutions for a certain problem than either of the methods alone.
- Here are the common types of Mixed method: h.

Key terms

Although it - not required, we are highly encouraged to utilize the Scientific Method in doing our research for us

05. Basic Concepts and Principles of Structural-Functionalism

Basic Concepts and Principles of Structural-Functionalism

- Topic: Basic Concepts and Principles of Structural Functionalism

I. Introduction

- A theory is defined as a coherent group of propositions or statements formulated to explain a group of facts or phenomena in the natural world that is repeatedly confirmed through experiment or observation.

II. History and Development of Structural Functionalism

- - Structural Functionalism originated from the works of English philosopher and biologist, Hebert Spencer - Mr.
- Social processes that have undesirable consequences for the operation of society are called dysfunctions. - Merton was the first to categorize functions into manifest functions and latent functions.

III. Major Concepts of Structural Functionalism

- Example of manifest and latent functions of "college education": Manifest functions are gaining knowledge, preparing for a career, and finding a good job Latent functions include meeting new people, participating in extracurricular activities, or even finding a spouse or partner.

III. Some Applications of Structural Functionalism Theory

- The government provides healthcare, education, and other services to families.

Key terms

Manifest functions - consequences of a social process that are anticipated or expected

Latent functions - unexpected consequences of a social process. Latent functions can be

06. Basic Concepts and Principles of Marxism

Basic Concepts and Principles of Marxism

- Topic: Basic Concepts and Principles of Marxism

I. Introduction

II. History and Development of Marxism

III. Major Concepts of Marxism

- It is materialistic because it does not believe that history has been driven by an individual's consciousness or ideas, but rather that material things are the fundamental substance of nature and the ultimate driving force in all of world history.

IV. Applications of Marxism

- Case studies on programs on just and equal distribution of goods and resources - Advocating for policies on free education, workers' rights, higher taxes for wealthy people Pedido, F.N. (n.d.).
-

07. Basic Concepts and Principles of Symbolic Interactionism

Basic Concepts and Principles of Symbolic Interactionism

- Topic: Basic Concepts and Principles of Symbolic Interactionism

I. Introduction

II. History and Development of Symbolic Interactionism

- This book highlighted the 3 core concepts in social interaction: Mind - this is the individual's ability to use symbols to create meanings for the world around the individual through language and thought.
- Self - this is the individual's ability to reflect on the way that he/she is perceived by others.

Cooley (1864-1929) and William Isaac Thomas (1863-1947)

III. Major Concepts of Symbolic Interactionism

- This means that humans exist in a world composed only of "objects" (natural), and that the realities of this world are shaped by the -- 2 of 3 -- shared interpretations and meanings (symbolic) within social interactions. - Symbolic Interactionism is grounded on 3 concepts: Individuals construct meaning via the commu...
- Self-concept (how an individual interprets themselves based on their own beliefs and how others perceive him/her) is a motivation for behavior.

IV. Applications of Symbolic Interactionism

- A country's flag could be a symbol of hope, peace, war, courage, etc., depending on the interaction or experience of an individual with it, which attaches the meaning - Skin color and facial features have been attributed certain meanings by society.
 - These are more commonly known as stereotypes. - There are a lot of symbols that refer to the male and female gender groups.
-

08. Review of the Basic Concepts and Principles of Major Social Science Theories and Ideas

- Review of the Basic Concepts and Principles of Major Social Science

Theories and Ideas

- Topic: Review of the Basic Concepts and Principles of Major Social Science Theories

I. Introduction

II. Important Concepts and the Criticism for Major Social Science Theories

1. Structural-Functionalism

- - Important Concepts: Pioneered by Herbert Spencer and further elaborated by Emile Durkheim, Alfred Radcliff-Brown,

Talcott Parsons, and Robert Merton

2. Marxism

Pioneered by Karl Marx and Friedrich Engels

3. Symbolic Interactionism

-- 2 of 4 -- - Important Concepts: Pioneered by George Herbert Mead, and further elaborated by his student, Herbert Spencer, and others Highlights the communication and interaction among individuals and how these create symbolic worlds that shape individual behavior - Criticism: Overly impressionistic and unsystematic.

Lacks testability

II. Conclusion

Key terms

Capitalism - exploitative because the rich owners (bourgeoisie) get richer, while the laborers

09. Basic Concepts and Principles of Psychoanalysis

Basic Concepts and Principles of Psychoanalysis

- Topic: Basic Concepts and Principles of Psychoanalysis

I. Introduction

- Social Science, as we have discussed, is an area of study that focuses on all aspects of societies and the relationships among individuals within these societies.
- However, Social Science is not only limited to these broad and encompassing kinds of analysis, it also has various theories and ideas that dive into the development of the physical, emotional, intellectual, and psychological aspects of a person.

II. History and Development of Psychoanalysis

III. Major Concepts of Psychoanalysis

- It operates entirely unconsciously (outside of conscious thought) and is the most primitive out of the three..
- Types of Defense Mechanism:

1. Rationalization - justification of an unacceptable behavior
2. Intellectualization - reasoning to block emotional distress
3. Reaction formation - changing unwanted emotions or feelings
4. Acting Out - carrying out extreme behavior
5. Projection - transferring the drive or behavior that causes anxiety to others
6. Dissociation - separating of the memories one can't deal with or doesn't want
7. Compartmentalization - separating part of oneself from awareness of other parts
8. Displacement - transferring of negative emotion from one person or thing
9. Regression - seeking the safety of an earlier development stage
10. Sublimation - diverting intolerable impulse to a socially desirable one
11. Compensation - balancing apparent weakness by accentuating the strength
12. Repression - unconscious forgetting of unwanted thought or trauma
13. Suppression - conscious type of forgetting to escape from the problem
14. Splitting - seeing everything as bad with nothing in between
15. Using Humor - directing on funny aspects of a painful situation

IV. Sample Applications of Psychoanalytic Theory

- - Understanding why someone who was hurt by a loved one will have trouble building strong relationships - Predicting how people will act or react based on traumatic experiences that unconsciously affect their behavior - Analysis on how individuals compensate for lack of parental love during childhood with other form...

Key terms

Id - concerned with the instant satisfaction of basic physical needs and urges. It operates entirely
Superego - concerned with social rules and morals. It develops as a child learns what their culture
Ego - concerned with the rational, pragmatic part of your personality. It is less primitive than the id
Defense mechanisms - tactics developed by the ego to protect against anxiety or depression

10. Basic Concepts and Principles of Rational Choice

Basic Concepts and Principles of Rational Choice

- Topic: Basic Concepts and Principles of Rational Choice

I. Introduction

- What if I told you that there is a comprehensive and empirical guide that can help you and society in analyzing and making these decisions?
- Well, you should because that's exactly what we will be learning about today!
- The Rational Choice Theory introduces a more analytic and empirical yet very simple approach and perspective on how we should assess the options provided to us to make the best decisions for ourselves and for society.

II. History and Development of Rational Choice Theory

- Therefore, the effectiveness of criminal justice depends largely on the certainty of punishment (outcome) rather than on its severity. - This emphasis on the "outcome" or the "benefit" is a key component of the Rational Choice Theory.

III. Major Concepts of Rational Choice Theory

- Also known as Choice Theory or Rational Action Theory - Rational Choice Theory is a framework to understand and model social and economic behavior.
- Transitivity means that if Option A is preferable to Option B and Option B is preferable to Option C, then Option A must also be preferable to Option C.
- This characteristic is more commonly used and encountered in Mathematics.
- Independence of irrelevant alternatives means that if it has been established that Option A is preferable to Option B and Option B is preferable to Option C, any new alternative or option that is introduced will not affect the prior order of preference.
- Examples of social resources are time, information, approval, and prestige.
- Types of rewards are social approval, recognition, money, gifts, or positive gestures, like a smile.
- Types of punishments are the opposite, which are social disapproval, humiliation, or negative gestures, like a frown.
- Some important assumptions of Exchange Theory are: People seek to maximize their profits, which means that they seek rewards and avoid punishments Interactions or "exchanges" operate within the social norms!

Most human fulfillment comes from other people

IV. Sample Applications of Rational Choice Theory

Key terms

Completeness - that every action can be compared or ranked with every other. For example
Option A - preferable to Option B, and Option B is preferable to Option C
Transitivity - that if Option A is preferable to Option B and Option B is preferable to Option C
Independence of irrelevant alternatives - that if it has been established that Option A is
Perfect Information - that the individual has full and certain information about alternatives or
Choice under uncertainty - that if there is uncertainty between an option and its eventual
Intertemporal Choice - that if the outcomes of certain options affect the individual at different
Limited Cognitive Ability - that analyzing and comparing the options may take time, effort
Types of rewards - social approval, recognition, money, gifts, or positive gestures, like a smile
Types of punishments - opposite, which are social disapproval, humiliation, or negative gestures

11. Basic Concepts and Principles of Institutionalism

Basic Concepts and Principles of Institutionalism

- Topic: Basic Concepts and Principles of Institutionalism

I. Introduction

II. History and Development of Institutionalism

- He himself is considered a modern institutionalist. - Institutionalism was further developed in the late 19th and early 20th centuries in the works of the American institutional economists. - The American movement also criticized classical economics and argued that economics was a series of transactions that were ma...
- Institutions are the rules of politics and the instruments of their enforcement. - More recent research has explored further the role of institutions as intermediaries between structures and outcomes.

III. Major Concepts of Institutionalism

- Once this constitution is established, the awareness that one must participate in the conduct of government is felt, influencing now the behavior of the civilization.

IV. Sample Applications of Institutionalism

Key terms

He himself - considered a modern institutionalist

12. Basic Concepts and Principles of Feminist Theory

Basic Concepts and Principles of Feminist Theory

OUT1

- Topic: Basic Concepts and Principles of Feminist Theory

I. Introduction

- Across most forms of literature, culture, and societies, dating back to even the most ancient times, the prominent gender was always a man.
- This has translated to various types of discrimination and violence against women, in the workplace, in politics, and even in daily life.
- While there is more to be done, we have come a long way to have a more equal society now.
- One of the main driving factors that pushed this advocacy forward is the rise of Feminism that eventually led to the emergence of the Feminist Theory.

II. History and Development of Feminist Theory

- 19TH TO EARLY 20TH CENTURY

- The movements initially focused on the promotion of equal contract and property rights for women and the opposition to "chattel marriage" which stated that married women and their children were owned by their husbands. -- 1 of 3 -- It eventually led to political movements that advocated the right of women's suffrage...

III. Major Concepts of Feminist Theory

Discrimination

Stereotyping

Sexual objectification

Oppression

Patriarchy

IV. Sample Applications of Feminist Theory

Key terms

Women's personal lives - affected by these sexist power structures

13. Basic Concepts and Principles of Hermeneutical Phenomenology

Basic Concepts and Principles of Hermeneutical Phenomenology

- Topic: Basic Concepts and Principles of Hermeneutical Phenomenology

I. Introduction

- One of the methods is the Hermeneutic Phenomenology approach which interprets the actions of man based on their personal experiences.

II. History and Development of Hermeneutical Phenomenology

III. Major Concepts of Hermeneutical Phenomenology

1. Phenomenological epoch

- The term epoch means suspending the natural attitude towards something, which includes the subject's prejudices, biases, and beliefs towards the object b.

2. Eidetic reduction

- This is the process of reducing one's experience to its essence, which is to look for something that makes things different from others. b.
- Her essence, therefore, is within her ability to nurture and be a mother since, without these attributes, one cannot be a woman.

3. Transcendental reduction

- This is the process of reducing the meaning of a particular activity to one's experience to highlight one's consciousness of the object. b.
- Example: I know that there are thousands of dogs in the world, but my dog is the only pet that stays with me when I feel lonely and sad.

IV. Sample Applications of Hermeneutical Phenomenology

- Analyzing a Facebook post What is the meaning of the post?
- What is the possible intent of the author of the post?
- What is the target audience of the post?
- What is the interpretation of the post?
- What is the relevance of the interpretation in the issue being discussed?

Key terms

Man - very complex. Analyzing and interpreting man's nature and essence will require specialized methods. One

14. Basic Concepts and Principles of Human-Environment Systems

Basic Concepts and Principles of Human-Environment Systems

- Topic: Basic Concepts and Principles of Human-Environment Systems

I. Introduction

- Worst of all, the less fortunate people are the ones impacted by these consequences the most.
- Therefore, it is important that we understand exactly how humans and the environment are related, and what we can do as a society to address the concerns properly.

II. History and Development of Human-Environment Systems

- Studies on the relationship of man and the environment date back to the ancient Greek and muslim philosopher. - During the Age of Enlightenment, there was a rising awareness of the environment and scientists addressed themes of sustainability via natural history and medicine.

III. Major Concepts of Human-Environment Systems

IV. Sample Applications of Human-Environment Systems

15. Review of the Basic Concepts and Principles of Major Social Science Theories and Ideas

- Review of the Basic Concepts and Principles of Major Social Science

Theories and Ideas

- Topic: Review of the Basic Concepts and Principles of Major Social Science Theories and Ideas

I. Introduction

II. Important Concepts and the Criticism for Major Social Science Theories and Ideas

1. Psychoanalysis

Pioneered by Sigmund Freud

- is defined both as a psychological theory and as a psychological treatment Three fundamental components of the human mind: Id (primal instincts), Ego (balanced), and

Superego (extremely upright)

- Criticism: Concepts such as the id, ego, and superego are not testable, irrefutable, and overly simplistic. -- 1 of 5 --

2. Rational Choice Theory

3. Institutionalism

- Important Concepts: Pioneered by Wilhelm Roscher, and further elaborated by American economists Individual human behavior follows a "logic of appropriateness" (rules, policies) that is created and managed by institutions - Criticism: "Chicken and Egg" dilemma - individuals influence societal behavior or society in...

4. Feminist Theory

It only advocates the rights of women

5. Hermeneutical Phenomenology

- Important Concepts: -- 3 of 5 --

Pioneered by Edmund Husserl

Meaning is co-determined

6. Human-Environment Systems

Influenced by the Human Ecology Theory of Urie Bronfenbrenner

- Humanity (human activities) affects the natural environment, and the impact to the natural environment then affects the social, economic, and political environment of humans. - Criticism: Tendency to focus on the direct causes of harm to the environment, and neglect the indirect causes like population growth, techno...

Key terms

Feminism - "hatred towards man" nor does it promote "women supremacy"

Process - from Phenomenological epoche (suspending the natural attitude), to Eidetic reduction

16. Filipino Thinkers in the 19th Century

Filipino Thinkers in the 19th Century

I. Introduction

II. JOSE RIZAL (1861-1896)

- For Rizal, the Filipinos were a relatively advanced society in pre-colonial times and that their backwardness was a result of colonialism.

III. ANDRES BONIFACIO (1863 - 1897)

IV. APOLINARIO MABINI (1864 - 1903)

- Apolinario Mabini was known as the "Sublime Paralytic." - In 1895, Mabini was struck with polio and his lower limbs were paralyzed.
- It is also the same element that should guide revolutions.

V. EMILIO JACINTO (1875 - 1899)

- Emilio Jacinto popularly referred to as the "Brains of the Katipunan" due to significant contributions to the Katipunan, primarily through his literary works such as Kartilya ng Katipunan (Primer of Katipunan) and his articles in Kalayaan, the newspaper of the Katipunan - The Kartilya became the source of values o...
 - For example, charity is the performance of care for others that is void of self-interest. - Jacinto also promoted the concept of equality in three respects: race, gender, and social status.
-

17. Filipino Thinkers in the 20th and 21st Century

Filipino Thinkers in the 20th and 21st Century

I. Introduction

II. MANUEL L. QUEZON (1878 - 1944)

III. ISABELO DE LOS REYES (1864 - 1938)

Workers Union of the Philippines)

IV. CLARO M. RECTO (1890-1960)

V. VIRGILIO ENRIQUEZ (1942 -1994)

Key terms

Political pragmatism - principle which says that one must fight for a goal, but must proceed

18. The Role of Filipino indigenous social ideas to National Development

I. Introduction

II. History and Development of Sikolohiyang Pilipino

- Pantayong Pananaw - emerged from the proposal of Zeus Salazar of a new timeline or periodization of Philippine history, which was called Bagong Kasaysayan (New History) based on the internal logic of historical events and not on the traditional and colonial parameters of periodization such as the coming of the colon...
- It argues that Filipinos should set their own intellectual course and purpose, and steer our own ideology in the service of the Filipino and for the betterment of our society.

III. Basic Concepts and Principles of Filipino Psychology

- KAPWA (shared inner self) is the core construct of Filipino psychology.
- Kapwa has two categories, ibang tao (outsider) and hindi ibang tao (one of us) IBANG TAO has 5 levels of interaction: PAKIKITUNGO (civility) - right behaviour towards authorities.
- HINDI IBANG TAO has 3 levels of interactions: PAKIKIPAGPALAGAYANG-LOOB - an act of mutual trust; you gain trust from a camaraderie or fellow human being. -- 2 of 4 -- PAKIKISANGKOT - act of joining others; people join/share responsibilities in a particular group.

- OTHER CONCEPTS

- KAGANDAHANG-LOOB - refers to being of help to other people in times of need due to a perception of being together as a part of Filipino humanity.
- HIYA - directly translated as "shyness," but refers to "sense of propriety" or quality of being properly following recognized customs.
- It is used as an expression as a culture-influenced adaptive coping strategy when faced with challenging situations.

PAKIKIBAKA - fighting against a common enemy

- SOCIETAL VALUES

- RESEARCH METHODS

- PAKIKIPAGKUWENTUHAN - the researcher engages in story-telling by being the facilitator, while the kalahok (participants) are the ones who are to talk to them.
- PAGTATANONG-TANONG - the researcher undergoes a kind of questioning session with the kalahok.
